MedicBot.ai

Introduction

MedicBot.AI project is the outcome of our team's participation in the 2020 EHFG.org Hackathon event where we had to design and build innovative solutions in the healthcare industry related to mental health.

We are the founders of MedicPad, a MedTech company based in Amsterdam.

MEDICPAD

A Brief Company History

Dec 2018

Company Founded

Mar 2020

HealthInc Accelerator
Amsterdam

Q4 2020 → Q1 2021

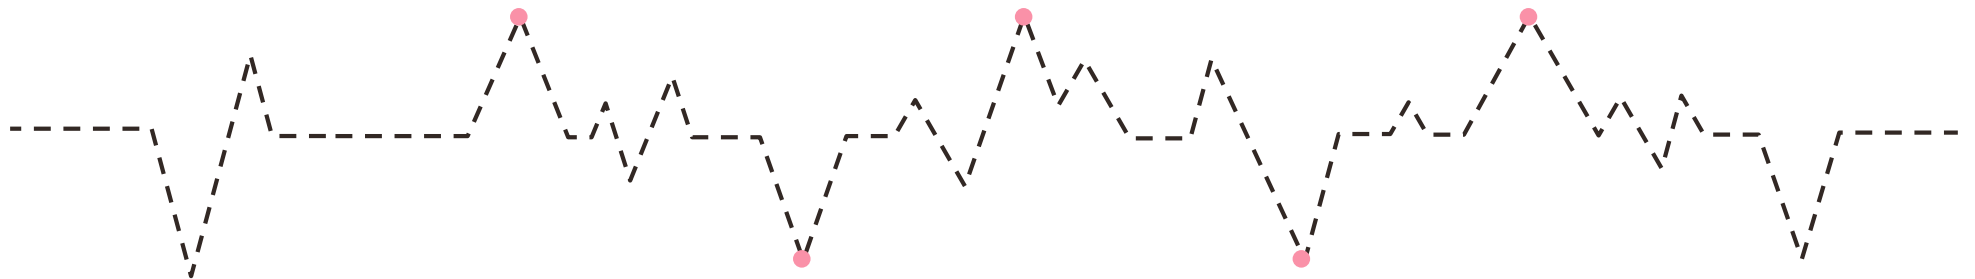

Expanded our product
offerings & rebranded

Mar 2019

Angel Investment

May 2020

1st Revenue

The 2 main problems we want to solve.

#1

Doctors and nurses have an ever-growing list of non-care related tasks & data gathering responsibilities they must perform daily which results in **78% burnout from stress and fatigue.**

#2

Children who are at the hospital have very limited resources to **continue being “a kid”** and still have fun while going through medical procedures and stuck in a hospital room for several days or longer.

Our Solution

We call him “Marvin”.

And we believe that he can help to unburden HCPs, ensure treatment adherence, provide companionship, increase healthcare accessibility, monitor health parameters and support mental health.

Project Scope & Objectives

01

Compatibility

We want to explore the acceptance criteria between kids and semi-autonomous robots in hospitals.

03

Fun & Games

Kids love to have fun! So we want to make it our mission to bring the fun back while children are at the hospital.

02

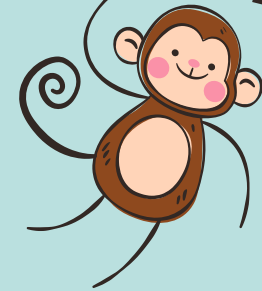

Interactivity

We want to discover new ways that doctors & nurses can interact with kids inside a hospital room.

04

Operational Utility

We want to leverage voice & face recognition powered by AI/ML to assist hospital staff in daily operations with automation & robotics.

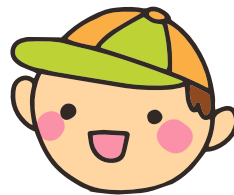

Project Success Factors

What will the kids say?

Jenna, 6

“Marvin is the coolest robot I’ve met. He makes me laugh!”

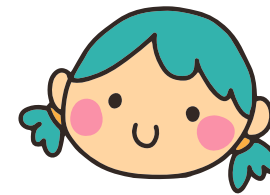

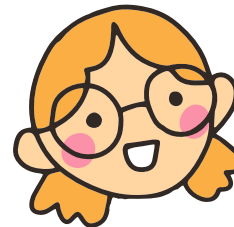

John, 8

“Marvin actually knows who I am when he comes and visits me because of his face & voice recognition technology”

Helena, 7

“I like the games on Marvin’s touchscreen, it gives me something fun to do while I wait for the nurse to return.”

Cindy, 9

“I miss my mom when I’m here alone and Marvin let’s me do video calls with my mom when she’s at work!”

"This robot is more useful to us than just providing fun for the kids. We use him to automatically gather situational awareness data throughout the hospital which saves our staff a lot of time!"

– Hospital Medical Director

Project Success Factors

What will the doctors & nurses say?

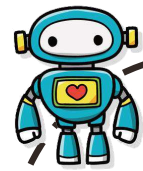

Can we see Marvin? Sure!

SAAS Revenue Model

350€/mo

HARDWARE

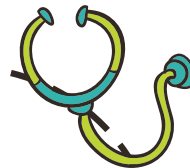

Direct cost to rent the generic robot hardware from Germany.

150€/mo

SOFTWARE

We resell the robot with our customized software platform as a more intelligent and useful robot.

35€/mo

BONUS

10% hardware sales commission from Germany

Our Team

● **Mihai Draghici**

The tech guy and our founder.

● **Carlos Ferreira**

The business guy and our money maker.

● **Diana Mereu**

The pretty one and our marketing guru.

Thank you!
